

LEAD PRODUCT DESIGNER (END-TO-END OWNERSHIP)

CLOUD SOFTWARE GROUP – WEBFOCUS

SPRING 2024 – SPRING 2025

EXECUTIVE SUMMARY

WE BUILT THE INTELLIGENCE. NOBODY KNEW IT EXISTED.

- Anuja Harsha — Lead Product Designer
- Third Case Study

EXECUTIVE SUMMARY

- Situation: 3 powerful AI tools existed but had near-zero adoption due to poor visibility.
- Action: I unified NLQ, Insights, and ML into a single "DSML Hub".
- Result: +25% adoption of NLQ from redesign. Hub fully implemented in code, pending launch.

THE "INVISIBLE FEATURE" PROBLEM

- 3 powerful tools (NLQ, Insights, ML) were siloed.
- Buried in deep menus; zero cross-pollination.
- Near-zero adoption rate despite high capability.

"Visualizing the fragmented architecture before the redesign."

UNIFYING THE EXPERIENCE

- Audit revealed massive fragmentation.
- Users treated each tool as a separate product.
- Identified opportunity for a "Hub" model.

"Early concept sketches showing the unification strategy."

ARCHITECTURE STRATEGY

- Create a dedicated "DSML Hub".
- Unify visual language across all 3 engines.
- Outcome-based navigation (Predict, Ask, Analyze).

THE SOLUTION: A SINGLE ENTRY POINT

- Unified Landing Page for all AI tasks.
- Consistent entry points involved no learning curve.
- Shared component library reduced engineering load.

QUALITY & SCALABILITY

- Responsive: First fully responsive Hub app.
- Lazy Loading: Configuration only when needed.
- Scaffolding: Empty states guide first-time users.

FUTURE IMPACT

- +25% NLQ Adoption from redesign (Phi-3 upgrade).
- Hub fully implemented.
- Foundation for AI roadmap.

ECOSYSTEM VISION

- Next: Connect ReportCaster to schedule AI insights.
- Vision: NLQ as a chat interface for the whole platform.
- Role: End-to-End Ownership (Roadmap to Architecture).

IQ PLUGIN PROTOTYPE - WORKFLOW WALKTHROUGH WITH VOICEOVER

Millions Invested in AI. Nobody Knew It Existed.

NLQ buried inside a popup. Insights hidden in a submenu. Predictive Machine Learning locked inside complex data flow canvases. We had built powerful enterprise ML capabilities, but because they were fragmented across the platform, adoption was sitting at near-zero.

THE ADOPTION CRISIS

Three distinct ML features relying on three entirely different entry points and mental models. Leadership assumed our underlying forecasting models weren't robust enough. The truth was far simpler: **We didn't need to scrap our AI architecture. We just needed to consolidate it into a unified, discoverable surface.**

NOT ASSIGNED - CO-CREATED

My PM Karishma and I conceived the Hub together. My Director of Design and Head PM shaped the vision with us. Karishma pitched. VP approved. We owned it end-to-end.

THE FRAGMENTED LANDSCAPE

TWO PATHS - ZERO SHARED CONTEXT

PATH 1 - FINDING NLQ OR INSIGHTS

4 clicks · buried in a popup · side-by-side tabs

PATH 2 - FINDING PREDICT DATA (ML)

4 clicks · completely different path · different mental model

Two separate paths. Two mental models.

No wonder nobody found them.

THE TURNING POINT

**Same PM. Same engineers. Same designer.
NLQ, Insights, ML — I'd modernized each
one. IQ brought them all together. The
culmination of everything I'd pushed for.**

Architecture Before Tickets.

I pushed for things never done in the org. Karishma wrote tickets after seeing my mockups. 3–4 meetings a week across timezones — architecture already mapped before anyone asked.

THE SOLUTION — ONE CLICK

IQ ARCHITECTURE

One Entry Point

Smart integration inside the existing Hub. No new infrastructure needed. Three scattered menus → one destination, one mental model.

First fully responsive Hub app

Four Iterations to the Final Hub.

V1 too dense, V2 too passive, V3 competed with Hub navigation. V4 — clean icon tiles — landed.

DESIGN ITERATIONS

V1 — TOO DENSE

First concept — too much information

V2 — TOO PASSIVE

VIEW FOCUS

Second iteration — too sparse

V3 — COMPETED WITH HUB NAV

VIEW FOCUS

Third iteration — competed with Hub navigation

V4 — SHIPPED ✓

The Navigation Fight

The lead architect — 20+ years — wanted list views. The WebFOCUS architect — 35+ years — backed him. My argument: lists are exactly why nobody found these features. Large tiles give immediate context.

IQ WALKTHROUGH

The screenshot displays the WebFOCUS IQ Hub interface. The top navigation bar includes the WebFOCUS logo and the text 'WebFOCUS | Hub'. Below the navigation bar, there are tabs for 'Insights', 'Ask a Question', and 'Predict Data'. The main content area is titled 'What are Insights?' and features a pie chart and a list of data points. Below this, there are two columns: 'Tutorials' and 'Learn more'. The 'Tutorials' column lists six tutorials, each with a title and a brief description. The 'Learn more' column includes links to 'Help Documentation', 'Ibi Community', and 'Ibi YouTube channel'. The interface is clean and modern, with a blue and white color scheme.

THE TURNING POINT

My Director of Design said it best — bold and fearless. Industry examples. Interaction logic. Visual prototypes. He was fully in my corner, watching me make my own case.

The Room Full of Veterans.

Director of Engineering. Principal Data Scientist. Head PM. Lead Architect. All decades of tenure. I was 2 years in. Karishma and I were the only new people in the room.

20yr

25yr

30yr

35yr

vs

2yr

Every Meeting, Outnumbered

Veterans with 20 to 35 years at WebFOCUS. My PM and I onboarded together. We pushed the vision together.

EARNED TRUST

And They Were Listening

It hit me later — I was arguing about data flows and ML architecture with people who'd been here for decades. And they were listening.

THE TURNING POINT

//

Two years in. Everyone else — decades. I set up meetings, drove cross-functional alignment, nudged PMs to collaborate. That wasn't my job title. It was just what the project needed.

//

Visibility Was the Solution.

NLQ redesign + Phi-3 model upgrade drove +25% adoption. Customers looked forward to NLQ the most. The Hub brings all of it — NLQ, Insights, ML — front and center.

+25%

NLQ adoption from discoverability alone. No feature changes. The highest-leverage design work: making existing features findable.

3 → 1

Scattered tools unified into one Hub. The patterns became the platform's AI strategy foundation. NLQ + Insights live Hub implemented — final QA pending at departure.

What This Project Proved

We co-created this project as a team. The features didn't change. The visibility did. That's the highest-leverage design work there is.

KK

"Anuja led UX design initiatives with remarkable creativity, empathy, and precision. She consistently demonstrated a deep understanding of user-centered design and the ability to translate complex product requirements into intuitive and visually engaging experiences. What truly stands out is her collaborative spirit and problem-solving mindset."

— KARISHMA KHADGE, SENIOR PRODUCT MANAGER

VR

"Anuja made a significant impact modernizing UX across our legacy enterprise products. She brings a rare combination of strategic thinking, design intuition, and the ability to work seamlessly across product, engineering, and business teams. Anuja is bold in her ideas and consistently proactive in turning complex problems into practical, user-centered solutions."

— VIJAY RAMAN, VP OF PRODUCT MANAGEMENT

WHAT CAME BACK WITH ME

When I returned from maternity leave, the engineering team shared that they valued the way I approached design — understanding the system, asking the right questions, making informed decisions. The experience reinforced something I already believed: **context isn't transferable through documentation alone. It comes from genuine curiosity and investment in the problem.**

WHAT I'D PUSH HARDER FOR

Proper Tutorials and Onboarding

Tutorials & Onboarding: Initially proposed a dedicated "Get Started" panel. Through iteration, we improved the tutorials, Discover page, and Explore Data header instead — better UX, same goal.

FUTURE PLANS

Ecosystem Integration

Ecosystem Integration: Connect ReportCaster + IQ to auto-schedule generated insights. NLQ as a chat interface for the entire platform.
